► Building Restoration Solutions

Whether you own a condominium on the beach in Fort Lauderdale, work in a high-rise in Toronto or attend college in Phoenix, you know that there is one constant: The need for long-lasting repairs. The type of building and how it is used and its geography will vary, but the need for restoration where you live, work, play and learn is ongoing. MAPEI's wide range of time-tested products can address every aspect of the total building envelope, from the foundation to the roof, from the floors to the ceilings, and from the balconies to the facade. We can meet every restoration challenge from concrete repair and waterproofing to corrosion mitigation, structural strengthening and aesthetics.

For more than 80 years, MAPEI S.p.A., the Italian parent company of MAPEI Corporation (USA), has been preserving historical architecture throughout Italy and Europe. And for more than 30 years, our USA company has taken this knowledge and craftsmanship to cities in the United States, Canada and the Caribbean. Through these many years of experience, MAPEI has seen and examined every possible condition and has worked with engineers and contractors in developing comprehensive strategies for solving problems with the right products and the most effective solutions to stand the test of time.

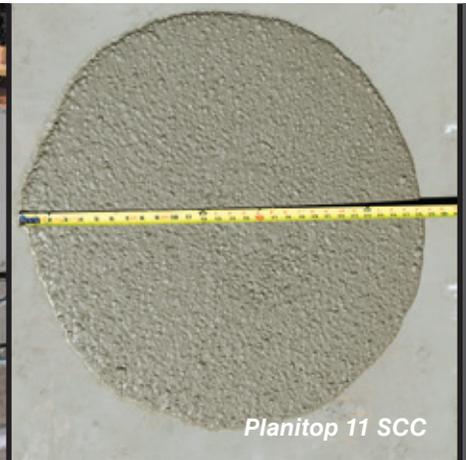

At MAPEI, we offer the technical support, the engineering, the products, the experience and the know-how to solve the restoration challenges ahead. MAPEI continues to invest heavily in research and state-of-the-art processes that help reshape the way we build by bringing more and more innovative products to our customers, who, in turn, help build better building structures.

A. Concrete Repair

1. **Planitop® X** and **Planitop XS** are for fast-setting, hand-applied repairs of vertical, overhead and horizontal structural concrete elements, like overhead beams, facades, balconies, ceilings and walkways.
2. **Planitop® 12 SR** and **Planitop 23** one- and two-component high-strength mortars are for hand and pump application on vertical and overhead concrete surfaces.

Building restoration solutions

3. **Planitop® 11** one-component, pumpable and pourable concrete mix is ideal for partial and full-depth repairs on balcony edges and garage columns from 1" to 8" (2.5 to 20 cm). **Planitop 11 SCC** one-component, self-consolidating, polymer-modified concrete mix is designed for form-and-pour and form-and-pump applications on horizontal, vertical and overhead balcony edges and garage columns. Containing silica fume and a corrosion inhibitor, it can be placed from 1" to 8" (2.5 to 20 cm)
4. **Planitop® 15** fiber-reinforced, fluid mortar containing silica fume is for both form-and-pour and form-and-pump applications on overhead beams and columns. It is designed for repairs up to 4" (10 cm), it can be extended 50% by weight for repairs up to 8" (20 cm).

5. **Planitop® 18**, **Planitop 18 ES** and **Planitop 18 TG** comply with ASTM C928 R3 requirements for "very rapid hardening" repair mortars. Dependent on the project requirements, **Planitop 18** products can be opened to traffic between 1 and 6 hours after placement and are available in flowable to trowel grades with extended working times. **Mapecem® Quickpatch** high-performance, fast-setting, patching mortar applies from featheredge to 3" (7.5 cm) for concrete floors, driveways, sidewalks and balconies.
6. **Ultratop®** decorative topping and **Ultratop PC** polishable topping are for fast-track concrete resurfacing of interior wear surfaces.
7. **Epojet™** high-modulus, low-viscosity epoxy injection resin and **Epojet LV** ultra low-viscosity epoxy injection resin are designed to seal cracks.
8. **Planibond® AE** nonsag, epoxy anchoring gel is also for cap sealing and setting injection ports. It is also available in the fast-setting version **Planibond AE Fast**.

B. Waterproofing

1. **Mapelastic**® flexible, cementitious waterproofing membrane protects concrete from chemical attack by de-icing salts, sulphates, chlorides and carbon dioxide that can lead to concrete deterioration. Use it in projects such as swimming pools, balconies, terraces, fountains and bathrooms.
2. **Mapefloor™ Parking Deck System** is a two-component, polyurethane system designed to provide an elastomeric waterproofing membrane for heavy pedestrian and vehicular traffic. The system includes an epoxy primer, **Primer SN™**, designed to enhance the adhesion of the **Mapefloor** system to the concrete substrate; **Mapefloor PU 400 LV** or **Mapefloor PU 400 FC** basecoat with its high flexibility and crack-bridging properties, for use as the waterproofing membrane; and **Mapefloor Finish 415 NA** aromatic interior topcoat and **Mapefloor Finish 450** aliphatic exterior topcoat, both designed to provide protective wear coats for parking decks and access ramps. For complete system details, consult the installation

Planiseal Plug

manual for **Mapefloor** Parking Deck Systems, found in the Related Documents section of the Concrete Restoration Systems page on MAPEI's Website.

3. **Resfoam™ HB 45** and **Resfoam HB 45C** flexible, hydrophobic polyurethane grouts are used for stopping water infiltration in all concrete elements within parking garages. They effectively form a permanent waterproof barrier against water intrusion.
4. **Planiseal® WR** penetrating, water-based silane/siloxane water repellent helps to protect horizontal and vertical concrete surfaces from moisture-related staining and dirt buildup. **Planiseal WR 40** clear, water-based, 40%-silane penetrating water repellent and sealer is designed to protect concrete and masonry against moisture/chloride intrusion. **Planiseal WR 100** is a clear, high-performance, 100%-silane penetrating water repellent and sealer designed to provide outstanding water repellence on concrete and masonry.
5. **Planiseal® Plug** fast-setting water-stop mortar patches and seals small water leaks in two minutes on both horizontal and vertical concrete surfaces.
6. **Idrostop™** hydrophilic, expandable rubber strip is used to produce watertight construction joints between concrete beds and elevation walls.

C. Corrosion Reduction

1. **Planibond® 3C** epoxy-modified corrosion inhibitor protects embedded steel reinforcement.
2. **Mapefer™ 1K** unique polymer, cementitious anticorrosion coating inhibits oxidation and rust formation on steel reinforcement.
3. **Mapeshield™ I** pure zinc galvanic anode is formulated to stop and prevent corrosion of reinforcing steel. It is available in two different lengths and with 10- and 20-year duration capabilities.
4. **Mapeshield™ CI 100** surface-applied corrosion inhibitor is designed to penetrate concrete structures and protect embedded steel reinforcement.

D. Moisture Reduction and Self-Leveling Underlayments

1. **Planiseal® MB** premium epoxy moisture barrier is for ultimate moisture transmission reduction.
2. **PlaniLevel™ 360** and **PlaniLevel 420** self-leveling underlayments allow flooring installation within 24 to 48 hours, while **PlaniLevel 450** and **PlaniLevel 500** are ready for flooring installation in 2 to 3 hours. In open areas without environmental controls, it is ideal to use **PlaniLevel 560** before enclosing the structure.

E. Facade Aesthetics

1. **Mapelastic® Smart** roll-grade, flexible, cementitious membrane waterproofs concrete and protects such concrete structures as new cementitious renders, retaining walls, concrete pillars and joists.
2. **Elastocolor®** protective and decorative acrylic coatings for facades and walls are available in unlimited color options and smooth or sanded textures.

F. Structural Strengthening

1. **MapeWrap**™ fiber-reinforced polymer (FRP) structural strengthening products consist of flexible carbon and fiberglass fiber fabrics. They are applied with dedicated epoxy resins to repair and maintain deteriorated concrete elements (columns and beams), to upgrade load-bearing capacity and to rectify original design flaws.
2. **Carboplate**™ carbon fiber plate and **Maperod**™ carbon fiber rod are pre-impregnated with epoxy-based resin to repair and upgrade beams and slabs for flexural strengthening, and to reinforce structures subject to vibration.
3. **MapeWrap**™ **C Fiocco** high-strength cord, made from uni-directional carbon fiber threads, is designed to be impregnated with **MapeWrap 21** to provide structural and functional restoration of concrete and masonry elements.
