

Don't let Mother Nature ruin your game!

No one wants a delayed game – especially because of a soggy field. Don't let your game be delayed due to a sub-base that can't handle the weather. MAPEI's *Mapesoil*™ product line offers solutions for stabilizing field sub-bases and ensuring proper drainage.

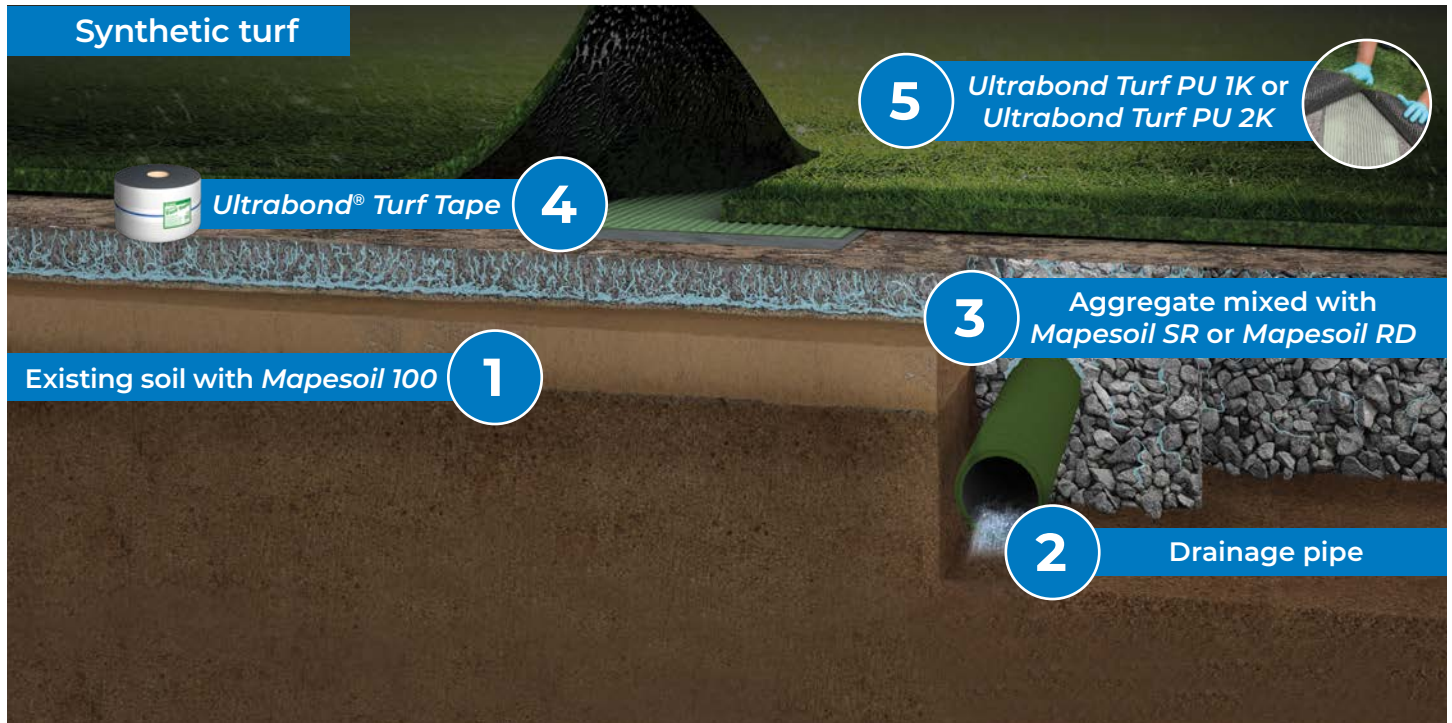

MAPEI's *Mapesoil* products are custom-designed to offer the strongest and best-engineered sub-bases in the industry. When a field is stabilized using *Mapesoil* technology, you know it can handle Mother Nature's worst moods.

— MAPEI USA • MAPEI Caribe —

MAPEI's *Mapesoil* products provide a customized system solution for your field, working to stabilize the existing soil.

Mapesoil 100

Mapesoil 100 is a hydraulic, high-performance, fiber-reinforced, powdered stabilizing agent used to treat and consolidate soil and recycled or raw aggregates, such as naturally graded soil. Available in super sacks for large installations, as well as in 33-lb. (15-kg) bags for smaller repair areas.

Mapesoil RD

Mapesoil RD is a powdered, cement-based binder that is mixed with aggregate. It is used in place of standard cement to create a sub-base with high mechanical properties while maintaining excellent permeability. Available in 50-lb. (22.7-kg) bags.

Mapesoil SR

Mapesoil SR is a sprayable, cement-based binder that can be used to solidify and repair existing sub-bases and improve water infiltration rates. Available in 50-lb. (22.7-kg) bags.
