Ultrabond ECO 373 is a super aggressive, pressure-sensitive adhesive that is designed for the installation of a wide variety of resilient flooring types. Ultrabond ECO 373 has been specifically formulated to provide extended working time and can be applied using a trowel or roller, depending on the level of tack that is required for the flooring that is being installed.

**FEATURES AND BENEFITS**
- Dries quickly with super aggressive tack properties
- Up to 12 hours of working time
- Apply using either a trowel or roller, depending on the flooring type

**INDUSTRY STANDARDS AND APPROVALS**
- CRI Green Label Plus #GLP12617. Refer to the CRI’s Website at www.carpet-rug.org for additional information.
- Living Building Challenge (LBC) Red List Free: This product has been verified per the most current Red List on the LBC’s Website.

**WHERE TO USE**
- Approved for use with luxury vinyl tile (LVT) and luxury vinyl plank (LVP); vinyl-enhanced tile; quartz tile; bio-based tile; fiberglass-reinforced vinyl sheet flooring; solid vinyl sheet flooring; reground rubber underlayment; cork underlayment; vinyl- and polyolefin-backed carpet tile
- Interior residential (rental apartments, condominiums and homes)
- Interior commercial (office buildings, hotel rooms/hallways and restaurant dining areas)
- Interior heavy commercial (hotel lobbies, convention centers, airports and department stores)
- Interior institutional (hospitals, schools, universities, libraries and government buildings)

**LIMITATIONS**
- Do not install over substrates containing asbestos.
- For interior installations only
- Install flooring only in areas recommended by the flooring manufacturer.
- Do not install into wet adhesive over nonporous substrates.
- Do not use to install LVT or LVP with known dimensional stability issues.
- Do not apply over any adhesive residues, including cutback adhesive.
- Do not install when the moisture vapor emission rate (MVER) exceeds 15 lbs. per 1,000 sq. ft. (6.80 kg per 92.9 m²) per 24 hours, when using the anhydrous calcium chloride test (ASTM F1869).
- Do not install when the relative humidity (RH) of the concrete slab exceeds 99% (ASTM F2170).
- Do not install in areas with known hydrostatic moisture problems, osmotic blistering or alkalai-silica reaction.
- Use only when the substrate temperature is between 50°F and 90°F (10°C and 32°C).
- Do not install sheet flooring using wet-lay installation methods when the moisture vapor emission rate (MVER) exceeds 10 lbs. per 1,000 sq. ft.
(4.54 kg per 92.9 m²) per 24 hours or when the RH of the concrete slab exceeds 90%.
- Do not install unless the surface temperature of the substrate is at least 5 degrees Fahrenheit (2.8 degrees Celsius) above the dew point.
- Do not install when the pH is greater than or equal to 12.

**SUITABLE SUBSTRATES**
- Concrete (at least 28 days old) installed per guidelines outlined in ASTM F710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring, or in ACI 302.2R-06 Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials – both of which require the placement of an impervious moisture barrier beneath the concrete slab.
- Cement terrazzo
- Exterior-grade plywood and other approved wood substrates (per the flooring manufacturer’s recommendations)
- Cement-based self-leveling underlayments and patching compounds
- Properly primed gypsum underlayments that meet the requirements for compressive strength according to ASTM F2419
- Radiant-heat systems that have been properly installed and that are maintained at a maximum of 85°F (29°C) surface temperature
- Properly installed and sound MAPEI epoxy moisture barriers

Consult MAPEI's Technical Services Department for installation recommendations regarding substrates and conditions not listed.

**SURFACE PREPARATION**
- All substrates must be structurally sound, dry, solid and stable.
- The substrate should be clean and free of dust, dirt, oil, grease, paint, curing agents, concrete sealers, loosely bonded toppings, loose particles, and any other substance or condition that may affect the overall performance of the product.
- Substrates must be flat to 3/16” in a 10-foot span (4.5 mm in a 3.05-m span).

See the “Surface preparation requirements” reference guide in the Floor Covering Installation Systems section of MAPEI’s Website.

**MIXING**
Before product use, take appropriate safety precautions. Refer to the Safety Data Sheet for details.
- Ready to use; no mixing is necessary.

**PRODUCT APPLICATION**
Refer to the flooring manufacturer’s guidelines for acclimation requirements and complete installation instructions. Read all installation instructions thoroughly before installation.

1. Select the appropriate application tool (see the “Approximate Coverage” chart below) and spread the adhesive evenly over the subfloor, keeping the trowel at a 45-degree angle to the subfloor.
2. On nonporous substrates, allow the adhesive to remain open for 30 minutes to 1 hour or until dry to the touch and then place the flooring.
3. On porous substrates, flooring can be installed into semi-wet adhesive; or, allow the adhesive to remain open for 30 minutes to 1 hour until it is dry and does not transfer to the finger when touched.
4. Only apply as much adhesive as can be installed within 12 hours. Protect the open adhesive from dust and debris, which will inhibit proper bond and decrease tack.
5. Roll flooring according to the manufacturer’s recommendations.

**CLEANUP**
- Clean adhesive smudges from the flooring surface and tools with water while the adhesive is fresh/wet.

**PROTECTION**
- Building owners should become aware of the flooring manufacturer’s guidelines for climate-control settings (temperature and humidity). These conditions must be monitored and kept constant to ensure the overall performance and long-term success of the installation.
### Product Performance Properties

<table>
<thead>
<tr>
<th>Laboratory Tests</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solids content</td>
<td>54% to 60%</td>
</tr>
<tr>
<td>VOCs (Rule #1168 of California’s SCAQMD)</td>
<td>&lt; 10 g per L</td>
</tr>
<tr>
<td>VOCs (Section 01350 of California’s CDPH)</td>
<td>Passed</td>
</tr>
<tr>
<td>Density</td>
<td>8.3 lbs. per U.S. gal. (0.99 g per mL)</td>
</tr>
</tbody>
</table>

### Shelf Life and Product Characteristics

<table>
<thead>
<tr>
<th>Adhesive type</th>
<th>Acrylic latex</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consistency</td>

</tr>
<tr>
<td>Shelf life</td>
<td>2 years when stored in original, unopened packaging at 73°F (23°C)</td>
</tr>
<tr>
<td>Storage conditions</td>
<td>50°F to 90°F (10°C to 32°C)</td>
</tr>
</tbody>
</table>

Protect containers from freezing in transit and storage. If frozen, material should not be stirred until it has completely thawed. Provide for heated storage on site and deliver all materials at least 24 hours before work begins.

### Application Properties

<table>
<thead>
<tr>
<th>Flash point (Tag)</th>
<th>&gt; 201°F (94°C)</th>
