Ultrabond Eco 4 LVT

Technical Data

PRODUCT IDENTITY

Colour:	Light Beige
Consistency:	Creamy Paste
pH level:	7.5
EMICODE:	EC1 Plus - Very Low Emission

APPLICATION DATA (at +25°C - 50% R.H.)

Application Range Temps:	+15°C to +35°C
Waiting Time:	10 minutes
Open time:	Maximum 30 - 40 minutes
Set to light foot traffic:	3 to 4 hours
Ready for use:	48 hours
Resistance to moisture:	Good
Resistance to ageing:	Excellent
Resistance to solvents and oils:	Good
Resistance to temperature:	Excellent
Underfloor heating systems:	Suitable

Where to use

Ultrabond Eco 4 LVT is used for bonding internal LVT floors, PVC and semi-flexible vinyl tiles on all kinds of conventional absorbent substrates stable in the presence of humidity, normally used in the building industry.

Advantages

- **Ultrabond Eco 4 LVT** is a solvent-free, fibre-reinforced synthetic polymer-based adhesive in water dispersion.
- It is available in paste form which is easy to spread by trowel and is, in particular, used to bond LVT floor-covering materials.
- **Ultrabond Eco 4 LVT** stands out because it is extremely easy to spread and has a very high initial bond, which fixes the flooring fast to the substrate.
- When hardened, **Ultrabond Eco 4 LVT** forms a tough, flexible film which allows for an excellent bond on all kinds of substrates. It may also be used for floors subject to heavy pedestrian use, the passage of wheelchairs and for heated floors.
