

Completely solvent-free:

respect for people's health and the environment

Good workability:

less effort for floor layers

Excellent open time:

guarantees correct contact between the adhesive and wooden flooring

Perfect rib stability:

guarantees even distribution of the adhesive

Very high bond strength:

guarantees installation in compliance with current norms

High yield per m², 1 kg every m²:

lower consumption, 30% less compared with all other adhesives

Guaranteed by decades-long experience:

has guaranteed excellent, long-lasting bonding of all types of parquet in the largest projects all around the world

Lignobond

Lignobond. Celebrating 35 years in laying parquet.

The first ever epoxy-polyurethane adhesive for parquet is celebrating its 35th birthday!

Two-component epoxy-polyurethane adhesive for laying wooden floors. Ideal for bonding all types and sizes of wooden flooring on any kind of substrate. Ideal for heated screeds.

The first epoxy-adhesive in the world for parquet, formulated in 1976 by Giorgio Squinzi, co-founder and current CEO of MAPEI.

Lignobond, two-component epoxy-polyurethane adhesive for laying wooden floors was developed from other historic MAPEI epoxy-polyurethane adhesives, **Keralastic** and **Adesilex G19** (1974).

People's health and respect for the environment were already top priorities for MAPEI at the time, and **Lignobond**, completely solvent-free, was already an avant-garde product as far back as 1976. It was suitable for laying all types and sizes of wood on any kind of substrate, which also made it an extremely reliable product.

And today, after 35 years, **Lignobond** is still a highly valid, avant-garde, reliable product which guarantees perfect installation of any wooden floor.
