WHERE TO USE
Painting façades with cracks and concrete structures subject to deformation, including those particularly exposed to the deterioration action of algae, mould and fungi, to provide substrates with long-lasting protection against such forms of microorganism.

Some application examples
- Protecting concrete structures subject to small deformations when under load against carbonation.
- Protecting and decorating render and plaster with micro-cracks with a seamless elastic coat, including render and plaster already painted.
- Painting thin prefabricated structures subject to cracking.
- Painting façades damaged by algae and mould.
- Painting north-facing facades.

TECHNICAL CHARACTERISTICS
Elastocolor Pittura Plus is a one-component acrylic resin-based paint in water dispersion that forms a film on the surface through the action of natural light sources.

Once completely dry, Elastocolor Pittura Plus forms an elastic coat that remains impermeable to water and aggressive atmospheric agents (CO₂ - SO₂) while remaining permeable to vapour.
Elastocolor Pittura Plus has excellent resistance to ageing, freezing weather conditions and de-icing salts. Its photo-chemical film-forming process gives the painted surface an excellent dirt pick-up resistance.

Elastocolor Pittura Plus complies with the principles defined in EN 1504-9 (“Products and systems for the protection and repair of concrete structures: definitions, requirements, quality control and conformity assessment. General principles for the use and application of systems”), and the requirements of EN 1504-2 (“Protection systems for concrete surfaces”) for class: products for protecting surfaces - coating (C) - protection against the risk of penetration (1.3) (protection against ingress, PI) (ZA.1.d) + control of humidity (2.2) (moisture control, MC) and increase in resistivity (8.2) (increasing resistivity, IR) (ZA.1.e) + physical resistance (5.1) (resistance in physical, PR) (ZA.1.f).

Elastocolor Pittura Plus is particularly resistant to the growth of algae, mould and fungus. It may be used to paint walls that have already been damaged by such microorganisms after removing them and cleaning the surface, or to prevent them forming by painting buildings (and structures) in areas where the particularly damp climate encourages their growth.

Elastocolor Pittura Plus contains a special anti-mould and anti-alga product. Elastocolor Pittura Plus used in combination with Silancolor Primer Plus or Silancolor Base Coat Plus and, where necessary, with Silancolor Cleaner Plus, forms a complete protection system against biological aggression and provides a defence for surfaces which remains durable over the years.

Apart from protecting substrates, Elastocolor Pittura Plus, forms an attractive finish and is available in a wide range of colours, obtained using the ColorMap® automatic colouring system.

RECOMMENDATIONS
- Do not use Elastocolor Pittura Plus for waterproofing horizontal surfaces, such as terraces.
- Do not use Elastocolor Pittura Plus for waterproofing surfaces constantly immersed in water, such as basins, depurators and channels.
- Do not dilute Elastocolor Pittura Plus with solvent.
- Do not apply Elastocolor Pittura Plus on surfaces open to foot traffic.
- Do not use Elastocolor Pittura Plus for painting de-humidifying render.
- Do not apply Elastocolor Pittura Plus on damp substrates or on substrates which are not fully cured.
- Do not apply directly on surfaces where algae, mould or fungi have already formed. Remove beforehand with Silancolor Cleaner Plus and Silancolor Primer Plus before applying Elastocolor Pittura Plus.
- Do not apply Elastocolor Pittura Plus if the temperature is lower than +5°C or higher than +35°C (the surface must always be dry and must never be in direct sunlight).
- Do not apply Elastocolor Pittura Plus if the level of humidity is higher than 85%.
- Do not apply Elastocolor Pittura Plus if it is about to rain or in windy weather.
- Please refer to the “Safety instructions for preparation and application” section for further information.

APPLICATION PROCEDURE
Substrate preparation
The surface must be perfectly clean and solid, previously treated with a primer suitable for the situation and needs. Under normal conditions, use the transparent primer Malech or, in the case of low hiding power, the pigmented primer Quarzolite Base Coat. On surfaces that are already contaminated or particularly exposed to mould and algae, use the transparent, hygienising primer Silancolor Primer Plus or, in the case of low coverage colours, the pigmented, hygienising undercoat Silancolor Base Coat Plus.

On surfaces where the curing cycle used is unsure, or which are crumbling or have low absorbency, use Elastocolor Primer for the preliminary treatment. The primed surface must never be “shiny”.

Elastocolor Pittura Plus must only be applied on dry primer. Before applying the specified primer, repair any damaged or deteriorated areas of the concrete with controlled-shrinkage, fibre-reinforced mortar from the Mapegrout or Planitop lines.

Existing algae, mould and fungi must be removed while damp, that is after washing the surface with Silancolor Cleaner Plus. Completely remove all traces of dirt, dust, grease, oil and saline efflorescence that could affect adherence of Elastocolor Pittura Plus to the substrate.

On old surfaces the choice of the cleaning cycle to use depends on the type of dirt; washing with cold water is generally sufficient. Cleaning the surface with hot water or steam is particularly recommended for oil or grease stains. Sand-blasting may also be used. If there is no dirt on the surface, it may simply be brushed down with a stiff brush and then blown with compressed air to remove the dust.

Elastocolor Pittura Plus may be applied on render, plaster and concrete with capillary cracks, including if widespread, without any particular preparation.

For further information, please refer to the “Safety instructions for preparation and application” section.
**TECHNICAL DATA (typical values)**

Conforms to the following standards:
- products certified according to EN 1504-2 (Surface protection systems for concrete), 2+ and 3 system
- class according to EN 1504-2: surface protection products - coating - protection against ingress (1.3) (ZA.1d) + moisture control (2.2) and increasing resistivity (8.2) (ZA.1e) + physical resistance (5.1) (ZA.1f) (C, principles PI - MC - IR - PR)

**PRODUCT IDENTITY**

<table>

**APPLICATION DATA**

| Dilution rate:     | 10-15% of water |
| Re-coat time:      | 12-24 hours according to humidity and temperature and, in any case, only when the previous layer is completely dry |
| Application temperature: | +5°C to +35°C |
| Consumption (kg/m²): | 0.2-0.4 (per coat) |

**FINAL PERFORMANCE**

| VOC content of ready-mixed product (white) (European Directive 2004/42/EC) (g/l): | ≤ 20 |
| VOC content of ready-mixed product (coloured) (European Directive 2004/42/EC) (g/l): | ≤ 30 |
| Resistance to accelerated aging (colour RAL 7032) after 1,000 hours exposure to a Weather-Ometer (ASTM G 155 cycle 1): | ΔE < 2.5 |

**RESISTANCE TO BIOLOGICAL ATTACK (P.R.A. test report)**

| Resistance after 28 days to mould and fungi (EN 15457): | no growth |
| Resistance after 35 days to alga (EN 15458): | no growth |
Check for larger cracks and, depending on the depth, provide suitable sealing and, if necessary, levelling with Elastocolor Rasante or Elastocolor Rasante SF reinforced with Elastocolor Net.

**Preparation of the product**
Dilute Elastocolor Pittura Plus with 10-15% of water and mix using a drill at low-speed until completely blended.

When preparing only partial quantities, we recommend mixing undiluted Elastocolor Pittura Plus before pouring the required quantity off the original bucket.

**Application of the product**
Apply Elastocolor Pittura Plus by brush, roller or spray on the dry coat specified primer. When applying the product by brush or roller, at least 2 coats are required to obtain a complete and effective coverage. Wait 12-24 hours between each coat according to humidity and temperature conditions, and in any case, only when the previous layer is completely dry.

**Maintenance after application**
Elastocolor Pittura Plus may be washed with water and detergent (carry out a preliminary test beforehand as there are numerous products available on the market).

**Cleaning**
Brushes, rollers and spray equipment (airless) may be cleaned with water before Elastocolor Pittura Plus dries.

**CONSUMPTION**
Consumption is heavily influenced by the absorption and roughness of the substrate, by the colour of the paint applied and according to the application technique used. At standard conditions consumption rate is generally about 0.2-0.4 kg/m² (per coat).

**PACKAGING**
Elastocolor Pittura Plus is supplied in 20 kg plastic buckets.

**STORAGE**
24 months in a dry place away from sources of heat at a temperature of between +5°C and +30°C. Protect from freezing weather.

**SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION**
Instructions for the safe use of our products can be found on the latest version of the Safety Data Sheet, available from our website www.mapei.com.

**PRODUCT FOR PROFESSIONAL USE.**

**WARNING**
Although the technical details and recommendations contained in this product data sheet correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical application; for this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from the use of the product.

Please refer to the current version of the Technical Data Sheet, available from our website www.mapei.com

**LEGAL NOTICE**
The contents of this Technical Data Sheet (“TDS”) may be copied into another project-related document, but the resulting document shall not supplement or replace requirements per the TDS in force at the time of the MAPEI product installation. The most up-to-date TDS can be downloaded from our website www.mapei.com.

ANY ALTERATION TO THE WORDING OR REQUIREMENTS CONTAINED OR DERIVED FROM THIS TDS EXCLUDES THE RESPONSIBILITY OF MAPEI.
