WHERE TO USE
Applied in slurry form to waterproof concrete and cement mortar surfaces. Also used as a smoothing and waterproofing compound for underground walls before laying pre-formed membranes.

Some application examples
Waterproofing:
• internal wet areas, examples – bathrooms, showers, kitchens, laundry areas;
• balconies and terraces before tiling;
• basins, reservoirs, concrete or masonry tanks;
• swimming pools and water features;
• foundation walls.

ADVANTAGES
• Vapour-permeable; can be applied on damp substrates
• Easy application by brush, roller or trowel
• Highly flexible with good crack-bridging properties
• Compatible with ceramic, mosaic and natural stone coverings
• Can be combined with Mapetex 50 for excellent mechanical properties
• Reduces carbon dioxide penetration
• Non-toxic

TECHNICAL CHARACTERISTICS
Planiseal 388 is a two-component mortar, composed of a cement-based compound, selected graded aggregates, special additives and synthetic polymers in water dispersion, blended according to a formula developed in the MAPEI research laboratories. When mixed, Planiseal 388 becomes a fluid mortar that can be applied by hard-bristled brush, roller, trowel or by spray machine on horizontal and vertical surfaces. Planiseal 388 cures to form a waterproofing membrane with excellent adhesion to the substrate.

RECOMMENDATIONS
• Do not use Planiseal 388 for solving internal condensation problems (use dehumidifying renders, improve ventilation to the area or provide adequate insulation).
• Do not mix Planiseal 388 with additives, cement or aggregates.
• Do not apply Planiseal 388 to surfaces with standing water.
• Do not use the product if the packaging is damaged.

INSTALLATION INSTRUCTIONS
Preparing the substrate
The surface to be waterproofed must be perfectly clean and sound. Remove crumbly or loose parts, dust, cement laitance, form release agents, varnishes and paint by mechanical means or by high pressure water jetting. Renders must be perfectly anchored to the

substrate. Seal cracks in the substrate and repair damaged parts with products from the Mapegrout range. Fill all corners with 25 mm angle fillets prepared with a mortar mix of sand, cement and Planicrete additive and allowed to cure. Alternatively, corners may be treated with Mapeband tape (see section below on treatment of details). Completely prewet absorbent substrates to saturated surface dry condition (no standing water) before application. Treat plasterboards and cement boards with Primer G and allow to dry before applying Planiseal 388.

**Treatment of details**
In all waterproofing works, it is essential that particular attention is paid to details. Mapeband TPE is used to seal structural joints and joints subject to high dynamic stresses. Mapeband or Mapeband SA tapes are used to waterproof joints between horizontal and vertical elements. Special kits from the Drain range are used to seal drain outlet holes. It is absolutely imperative that special care is taken in these critical areas after levelling out and cleaning the substrate before applying the cementitious waterproofing mortar.

**Preparing the mortar**
Pour Component B (liquid) into a suitable, clean container. Then slowly add Component A (powder) while stirring with a low-speed mechanical mixer. Carefully mix Planiseal 388 thoroughly for a few minutes, taking care to blend in all the unmixed powder deposited on the sides and bottom of the bucket, until a perfectly homogeneous mix is obtained (free from lumps). Do not prepare the mix by hand.

**Applying the mortar**
Apply Planiseal 388 with a hard-bristled brush/broom, roller or trowel. Always apply a minimum of 2 coats. Make sure the previous coat is sufficiently dry before applying the next in a direction perpendicular to the first. In general, the waiting time is 5-6 hours depending on the temperature and the absorption of the substrate. In order to have good adhesion, it is recommended not to exceed 24 hours between coats. Pay particular care to corners and coves. When application is by trowel, it is recommended to treat the substrate with Planiseal 388 using a brush for the first coat. The crack-bridging properties of the waterproofing membrane can be further improved by inserting a layer of Mapetex 50 in between coats. Apply the first coat to the recommended thickness. While it is still wet, lay Mapetex 50 and press it down with a flat trowel or a spiked roller ensuring no wrinkles or bubbles are formed. Wait until the membrane is dry before applying the second coat. Planiseal 388 cannot be exposed to any type of traffic; wait at least 5 days for curing before over-laying with a protection screed or with floor tiles.

**PRECAUTIONS TO BE OBSERVED DURING AND AFTER APPLICATION**
In areas exposed to wind or direct sun, protect from rapid drying by covering with plastic sheets, properly secured.

**Cleaning**
Planiseal 388 can be removed from tools with water before it hardens. Once hardened, cleaning becomes difficult and can be carried out only mechanically.

**CONSUMPTION**
- For wet areas not subject to hydrostatic pressure: 1.0 kg/m² per coat x 3 coats
- For areas subject to hydrostatic pressure: 1.0 kg/m² per coat x 2 coats
- For areas requiring insertion of Mapetex 50: apply 1.0 kg/m² for the first coat and 1.5 kg/m² for the second coat

**PACKAGING**
Units of 30 kg - Component A: 20 kg bag, Component B: 10 kg drum.

**STORAGE**
Store the product components in their original unopened packaging in a cool dry place. Component A: 12 months; Component B: 12 months.

**SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION**
Planiseal 388 Component A contains cement that when in contact with sweat or other body fluids causes irritant alkaline reactions and allergic reactions to those predisposed. It can cause damage to eyes. Planiseal 388 Component B may cause sensitisation if it comes into contact with the skin of those predisposed. During use wear protective gloves and goggles and take the usual precautions for handling chemicals. If the product comes in contact with the eyes or skin, wash immediately with plenty of water and seek medical attention.
