**Reps to asphalt…**

have taken a new road.
Mape-Asphalt Repair 0/8

- Permanent repairs to holes.
- Supplied ready-to-use, solvent-free.
- Rapid hardening.
- Immediate set to foot traffic.
- Similar characteristics to conventional hot-applied asphalt.
- Suitable for application in cold weather.

Use
- Quick repairs to asphalt roads, motorways and industrial floors without interrupting the flow of traffic.
- Repairs to pavements and car-parks.
- Repairs to loading/unloading bays.
- To make small access ramps for pavements, garages and private entrances.

Advantages
- Highly reactive, hardens when it comes into contact with damp in the air and upon contact with water.
- Applicable in single layers from 20 to 70 mm thick. Deeper cavities may be repaired by applying several layers of the product one on top of the other, making sure each layer is wetted and compacted separately.
- Traffic passing over the repaired area will compact the product further without damaging it.
- Never softens once hardened, even at high temperatures.
- Resistant to intense loads if applied on a suitable substrate.
- Resistant to freezing weather and rain and guarantees a durable, stable repair similar to conventional hot-applied asphalt.
Mape-Asphalt Repair 0/8

One-component, ready-to-use reactive asphalt, applied cold, for repairing holes in roads.

Repairs to asphalt... have taken a new road.
