

# MAPESTONE SYSTEM

Long-lasting stone paving

## **Mapestone TFB 60**

**Pre-blended bedding mortar for architectonic stone flooring with high compressive strength.**

An easy to use, and only needs to be mixed with water. This means that dosing errors for the binder and the choice of aggregates by the user are avoided, which would otherwise compromise the final and initial characteristics of the hardened screed.

It may be prepared in either a plastic or a “no-slump” consistency, depending on the type of materials to be laid.

Typical application examples:

- Vehicular use for squares.
- Roads.
- Pavements.
- Parking Lots.
- Pedestrian crossings.
- Roundabouts.
- Speed humps.

## ***Mapestone PFS 2 Visco***

**Low viscosity ready-mixed grout for architectural slab and block-paved road surfaces and to provide better anchorage to the stone.**

Has a low level of viscosity which allows it to grout gaps and joints and flow easily into all the contact surfaces between the screed and stone blocks and in between the slabs. In so doing it eliminates any air pockets that form under the blocks and slabs when they are being laid, thereby improving adhesion between the stone and the bedding mortar.

Ready mixed product and just needs to be mixed with water, which makes it particularly easy to use. This prevents errors caused by mixing the wrong amount of binders or aggregates, thereby achieving the required final performance characteristics of the grout.
