

Mapetex System

PRODUCTS FOR
INSTALLING CERAMIC TILES AND STONE

Completely **removable system** for installing ceramic tiles and stone

Mapetex System

System for installing ceramic and stone with MAPETEX, the special isolating membrane made from high-strength, non-woven fabric that acts as an:

- **Anti fracture membrane**

When installing flooring on cracked cementitious substrates or on substrates that are not perfectly cured to prevent cracks in the substrate damaging the finished floor; the non-woven fabric in the system stops the cracks spreading to the new floor covering.

- **Isolating membrane**

When installing flooring on cementitious screeds without respecting the position of existing non-structural movement joints or on sample panels in display areas.

- **Removable substrate**

To protect substrates (chipboard, PVC, linoleum, ceramic, etc.) when installing removable ceramic or stone flooring and to help remove and replace tiling quickly.

Advantages of Mapetex System

Safe

- Prevents cracks propagating from the substrate to new ceramic tiles or stone flooring
- Slim, compact system that has very little effect on the overall thickness

Rapid

- Easy to install
- Ceramic and stone can be installed on substrates that are not completely cured
- Rapid-setting adhesives may be used so flooring can be put into service more quickly

Clean

- Simple, quick removal
- Clean working conditions

System for the installation of ceramic tiles on micro-cracked cementitious substrates and concrete walls
