Keraquick

High-performance, deformable, fast setting cementitious adhesive with no vertical slip, for ceramic tiles and stone material

CLASSIFICATION IN COMPLIANCE WITH EN 12004
Keraquick is an improved (2) fast setting (F) cementitious (C) adhesive and slip resistant (T) and deformable classified as C2FT S1.

Conformity of Keraquick is declared in ITT certificates no. 25070276/Gi (TUM), no. 25080059/Gi (TUM) and no. 25080063/Gi (TUM) issued by the Technische Universität München laboratory (Germany).

WHERE TO USE
Bonding to cement screeds, cement-based renders, cured concrete, existing floors internally and externally. For the installation of:
- ceramic and mosaic tiles of every type and stone materials that are not extremely sensitive to moisture;
- insulating materials such as expanded polystyrene and polyurethane, gypsum board, glass and rock wool, Eraclit®, foamed-concrete blocks, sound-deadening panels, etc.

Some application examples
- Repairs in heavily trafficked areas and when surfaces need to be put into service rapidly, such as public premises, motorway services, pedestrian passages, supermarkets, showrooms.
- Rapid installation or repairs in swimming pools, industrial plants (breweries, wine-cells, dairies, etc.), refrigeration units.
- Rapid repair work in bathrooms, showers, kitchens, balconies, terraces.
- Installing non-absorbent flooring over existing flooring, where the setting time of other cement-based adhesives would be too slow.
- Installing marble and other stone material, even light coloured stone (for the latter, use Keraquick white).
- Installing tiles onto heated screeds.

TECHNICAL CHARACTERISTICS
Keraquick is a grey or white powder composed of a blend of special cements, selectively-graded aggregates, synthetic resins and setting accelerators that develop high bonding strength only 2-3 hours after installing. For this reason floors and walls can be used very quickly. Floors are ready for use in 24 hours and can be walked on after only 2 hours.

By mixing Keraquick with Latex Plus the deformability improves, to meet the requirements of class C2F S2 (highly deformable, fast setting, improved cementitious adhesive) according to EN 12004.

RECOMMENDATIONS
Do not use Keraquick in the following cases:
- on metal, rubber, PVC and linoleum surfaces;
- on walls and floors subject to extreme flexing or vibration (wood, fibre-cement boards, etc.);
- for bonding insulating panels of expanded polystyrene with protective film.

APPLICATION PROCEDURE
Preparing the substrates
Substrates must be flat, mechanically strong, free from loose particles, grease, oil, paint, wax, etc. and sufficiently dry. Damp substrates could slow down Keraquick’s setting process.

Cementitious substrates must not be subject to shrinkage once the tiles have been installed, therefore in warm weather renders should be cured at least one week per centimetre of thickness. Cementitious screeds must have
Keraquick

an overall cure of at least 28 days unless they have been made with the special MAPEI binders for screeds such as Mapecem, Mapecem Pronto, Topcem or Topcem Pronto, ready-mixed mortars.

Surfaces that are too hot due to exposure to direct sunlight should be cooled by dampening them with water.

Gypsum substrates and anhydrite screeds must be perfectly dry (max. residual moisture 0.5%), sufficiently hard and free of dust. They must be treated with Primer G or Eco Prim T, while areas subject to high humidity must be treated with Primer S.

In general, refer to the relative MAPEI technical documentation regarding substrate preparation before repairing cracks in substrates, consolidating rapid-drying screeds and levelling installation surfaces.

Preparing the mix

A 25 kg bag of grey Keraquick should be mixed with approx. 5.5-6 litres of water, while a 23 kg bag of white Keraquick should be mixed with approx. 5.75-6.25 litres of water.

While stirring, pour Keraquick into a bucket containing clean water and mix with a mechanical stirrer until a homogeneous lump-free paste is obtained.

Let the mix stand a few minutes then stir again briefly before applying. The mixture must be used within 30 minutes of preparation.

Applying the mix

Keraquick is applied to the substrate with a notched trowel to a max of 10 mm thick.

To achieve good adhesion, first apply a skim coat of Keraquick onto the substrate using the straight edge of the trowel followed immediately by the correct thickness. When selecting the trowel, choose one that transfers the adhesive to at least 65 to 70% of the back of the tiles for interior walls and floors and 100% coverage for heavy traffic areas and exteriors.

- for mosaics up to 5x5 cm, the MAPEI square-notched trowel No. 4 is recommended;
- for normal ceramic wall tiles, the MAPEI V-notched trowel No. 5 is recommended;
- for floors, very irregular surfaces and tiles with high ribs or lugs, the MAPEI V-notched trowel No. 6 is recommended;
- for very demanding applications such as exteriors subject to freezing, installations in swimming pools and bath tubs, floors subject to heavy loads, floors to be polished in situ, dove-tailed tiles, tiles with deep ribs or lugs, or large-size tiles, the adhesive should also be applied to the back of the tiles (back-buttering).

This method is prescribed for sizes exceeding 900 cm² (30x30 cm). If the substrates are very absorbent and in high temperatures, it is recommended to dampen the substrate in order to extend the adhesive’s open time before applying Keraquick.

Installing the tiles

It is not necessary to wet the tiles before installation; if, however, the backs are very dusty, they should be dipped in clean water.

Keraquick’s open time in normal temperature and humidity is about 15-20 minutes; unfavourable weather conditions (strong sunlight, drying wind, high temperature), or a highly absorbent substrate may shorten this open time, sometimes quite drastically, to just a few minutes.

For these reasons, there must be constant checks to see whether the adhesive has formed a surface skin or is still fresh to the touch. Should a surface skin have formed, the adhesive should be re-trowelled.

It is not recommended to wet the adhesive when it has formed a skin because, instead of dissolving the skin, a non-adhesive film will be formed.

Tiling installed with Keraquick must not be subjected to washout or rain for at least 3 hours and must be protected from frost and strong sunlight for at least 24 hours after installation.

Spot-bonding insulating materials

Spot bonding to sound-deadening or insulating panels should be applied using a float or trowel, the trowel type and size to be determined by the flatness of the surface and the weight of the panels. In these cases too, the open time must be observed, bearing in mind that a few spots of adhesive on heavy panels may require temporary shoring which should then only be removed after Keraquick has begun to set.

GROUTING AND SEALING

Joints can be grouted after 3 hours with the special MAPEI cementitious or epoxy grouts, available in different colours. Expansion joints must be sealed with the special MAPEI sealants.

SET TO LIGHT FOOT TRAFFIC

Floors are set to light foot traffic after 2-3 hours.

READY FOR USE

Surfaces are ready for use after approximately 24 hours. Basins and swimming pools can be filled after 3 days.

Cleaning

Tools should be cleaned with water before the adhesive sets. Floors and walls can be cleaned with a damp cloth. Water should be used only in moderate quantities and after a few hours.
### TECHNICAL DATA (typical values)

In compliance with:
- European EN 12004 as C2FT S1
- European EN 12004 as C2F S2
  (if mixed with Latex Plus)
- ISO 13007-1 as C2FT S1
- ISO 13007-1 as C2F S2
  (if mixed with Latex Plus)

CONSUMPTION
1.2 kg/m² per mm of thickness.
Bonding floors and walls
mosaics and small size tiles: 2-3 kg/m²
(trowel No. 4/5)
medium size tiles: 4-5 kg/m²
(trowel No. 5/6)
large sizes, floors, exteriors: > 6 kg/m²
(trowel No. 6 or 10 or larger)
Bonding insulating material, etc.
foamed materials etc.: 0.5-0.8 kg/m²
gypsum wallboard,
foamed concrete: 1.5 kg/m²
full-bonding on rough surfaces: 2.5 kg/m²

PACKAGING
Grey Keraquick available in 25 kg bags.
White Keraquick available in 23 kg bags.

STORAGE
12 months in a dry place in the original packaging. Prolonged storage could extend the setting time without altering the final performance.
The product complies with the conditions of Annex XVII to Regulation (EC) N° 1907/2006 (REACH), item 47.

SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION
Keraquick is irritant, it contains cement that when in contact with sweat or other body fluids causes irritant alkaline reaction and allergic reactions to those predisposed. It can cause damage to eyes. In case of contact with eyes or skin wash immediately with plenty of water and seek medical attention. It is recommended to use protective gloves and goggles.
For further and complete information about the safe use of our product please refer to the latest version of our Material Safety Data Sheet.

PRODUCT FOR PROFESSIONAL USE.

WARNING
Although the technical details and recommendations contained in this product data sheet correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical application; for this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from the use of the product.

Please refer to the current version of the Technical Data Sheet, available from our website www.mapei.com

This symbol is used to identify Mapei products which give off a low level of volatile organic compounds (VOC) as certified by GEV (Gemeinschaft Emissionskontrollierte Verlegewerkstoffe, Klebstoffe und Bauprodukte e.V.), an international organisation for controlling the level of emissions from products used for floors.

Our Commitment To The Environment
MAPEI products assist Project Designers and Contractors create innovative LEED (The Leadership in Energy and Environmental Design) certified projects, in compliance with the U.S. Green Building Council.
