WASTE MANAGEMENT

Non-cured product is classified as hazardous waste. Cured or dried product should be disposed of in the same manner as other construction waste. Contact your local waste management facility.

ENVIRONMENTAL INFORMATION

See safety datasheet for the featured product.

MAINTENANCE

Surfaces should be cleaned when required. Where a coating of loose material has been applied to a surface, some material may be loosened the first time it is cleaned after application. This can be removed more quickly if the surface is washed using a pressure washer 4-8 weeks after application. The colour of the applied material may change, as such material is based on natural minerals. Similarly, the colour of the binding agent may also change on exposure to liquids and/or sunlight. Any such colour change should be considered normal. Any damage should be repaired as soon as possible.

CLEANING

Floors can be cleaned with pressure cleaners with a reduced pressure. Use **Mapefloor Cleaner ED** (1-3% in water) as a cleaning agent. Other alkaline cleaning agents may be used but we recommend cleaning a trial area to evaluate whether the agent is suitable for the flooring. The same applies to the use of detergents containing organic solvents.

Detergents must not be allowed to dry on the surface, but should be rinsed off using clean water.

SNOW CLEARING

It is recommended that brushes are used to clear away snow. If using equipment with steel edges, take care to ensure that the floor covering is not damaged.

REPAIRING DAMAGES

Any damage should always be repaired using the same material and system as originally used. Always contact the contractor before doing repairs.
